My fresco guide

Climate Fresco adult

This guide for facilitators supports the training of animators but cannot be distributed with the aim of replacing the training or participation in a Climate Fresh workshop.

The association is working on creating a universal common workshop to provide muralists with a robust workshop recipe that takes into account the upheavals in our societies, social inequalities, the feeling of powerlessness that can be felt, and the processes of climate distancing.

The team is also working to clarify a process for gathering best practices to provide supplements and slight adaptations so that this pedagogy can be contextual, different depending on the audience.

Your creativity in appropriating this tool and making the best version of it to raise awareness among the diversity of your participants is the strength of this project! Our mission is to equip new facilitators so that they take the step of facilitation and to provide the frameworks so that mutual aid and the sharing of best practices are facilitated throughout the community. That the initiatives and advances of certain muralist communities benefit the greatest number.

My notes:

THE CLIMATE COLLAGE WORKSHOP is an awareness tool for environmental issues, allowing understanding of the causes and consequences of climate change. The 42 cards of the workshop were designed based on data from the IPCC (Intergovernmental Panel on Climate Change) reports.

On 20 March 2023, the IPCC published the highly anticipated synthesis report of the sixth assessment cycle (AR6), titled AR6 Synthesis Report: Climate Change 2023

The idea for the workshop emerged in 2015, during a course delivered by Cédric Ringenbach, former director of the Shift Project, lecturer and teacher on climate change. After distributing IPCC charts to be put back in order, from causes to effects, he found that the exercise worked pedagogically. Thanks to the contribution of the first people trained in using the tool, the workshop has evolved over the past few years to reach its current form.

At the beginning of 2018, the Climate Collage tool has been spreading all over the world thanks to the facilitators of the Climate Collage, pioneers of the ecological transition.

PART 1 - THE PROJECT & THE ASSOCIATION LA FRESQUE DU CLIMAT

Accelerate the understanding of climate issues at a global level to help trigger the necessary shifts for the preservation of life as soon as possible

Its purpose:

In December 2018, the association La Fresque du Climat was created to accelerate the dissemination of the workshop and to train and support the community of Fresqueur-euses. Today, the association is composed of around fifty permanent members, supported by an engaged and international community of volunteer and professional facilitators, acting for the climate alongside the association. The association consists of a board of directors, composed of a representative panel of the community, and chaired by Anaïs Terrien since March 2024.

THE ASSOCIATION LA FRESQUE DU CLIMAT

This document condenses and integrates the main findings of the three contributions from the working groups, as well as the three special reports produced during the current AR6 cycle:

- the scientific elements (2021)
- impact, adaptation and vulnerability (2022)
- climate change mitigation (2022)
